

Forklift Fork Positioner

Forklift Fork Positioners - A fork positioner is actually an apparatus made out of high quality materials designed to withstand the most demanding procedures and work environments. This piece of equipment could enable drivers to work the forks hydraulically without leaving the seat. Side shifting models have the extra ability to laterally position the entire load or the arms in order to facilitate more exact carrying and placement in a quicker and much more efficient method.

The unique blade pocket design can enable the person operating it to safely sway the unit's blades without any fear of damaging the positioning cylinders. This could allow the worker the alternative to either perform simultaneous or independent blade movement, dependent upon the requirements of the job. For most forklifts with non-OEM carriages, complete carriages are necessary. Standard OEM carriages can be transformed into blade positioners on available units.
